

Project 4, Query test results.

1. Query 1: “reduce suspensions and expulsions.”

This is a direct quote from document 3.txt.

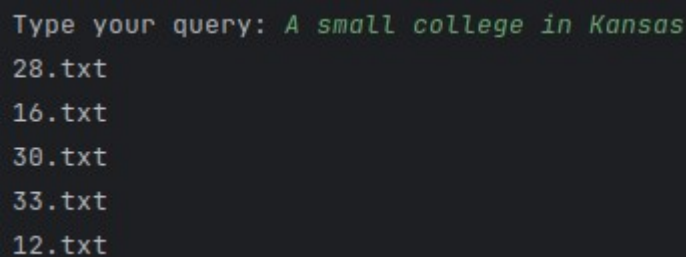

```
Type your query: reduce suspensions and expulsions
3.txt
14.txt
17.txt
41.txt
58.txt
```

3.txt is returned as the most relevant, as expected. The other documents are also relevant, but less so. 14.txt is a discussion about a school-board meeting to discuss reducing school suspensions; 17.txt doesn't discuss suspensions, but is instead about international student finances; 41.txt discusses student mental health; 58.txt is an excerpt from an interview with Jenna Lyle, a spokesperson for New York schools.

2. Query 2: “A small college in Kansas.”

This is a direct quote from document 28.txt.

```
Type your query: A small college in Kansas
28.txt
16.txt
30.txt
33.txt
12.txt
```

28.txt is returned as the most relevant, as expected. Again, the other documents are also arguably relevant, but less so. 16.txt is a piece about university attendance costs; 30.txt is about Jay Leno donating money to a college, or something; 33.txt is about McPherson College's burgeoning student population; 12.txt is about 'restorative justice' in schools.
